

**Important Instructions to examiners:**

- 1) The answers should be examined by key words and not as word-to-word as given in the model answer scheme.
- 2) The model answer and the answer written by candidate may vary but the examiner may try to assess the understanding level of the candidate.
- 3) The language errors such as grammatical, spelling errors should not be given more importance. (Not applicable for subject English and Communication Skills.)
- 4) While assessing figures, examiner may give credit for principal components indicated in the figure. The figures drawn by the candidate and those in the model answer may vary. The examiner may give credit for any equivalent figure drawn.
- 5) Credits may be given step wise for numerical problems. In some cases, the assumed constant values may vary and there may be some difference in the candidate's answers and the model answer.
- 6) In case of some questions credit may be given by judgment on part of examiner of relevant answer based on candidate's understanding.
- 7) For programming language papers, credit may be given to any other program based on equivalent concept.

Q.2	(e)	<p><b>Explain briefly the working principle of Bourdon pressure gauge with a neat sketch.</b></p> <p><b>Ans.</b></p>  <p style="text-align: center;">Bourdon Tube Pressure Gauge</p>	2	
		<p><b>Working :</b></p> <p>The pressure to be measured is connected to the fixed open end of the bourdon tube. The applied pressure acts on the inner walls of the bourdon tube. Due to the applied pressure, the bourdon tube tends to change in cross – section from elliptical to circular. This tends to straighten the bourdon tube causing a displacement of the free end of the bourdon tube. This displacement of the free closed end of the bourdon tube is proportional to the applied pressure. As the free end of the bourdon tube is connected to a link – section – pinion arrangement, the displacement is amplified and converted to a rotary motion of the pinion. As the pinion rotates, it makes the pointer to assume a new position on a pressure calibrated scale to indicate the applied pressure directly. As the pressure in the case containing the bourdon tube is usually atmospheric, the pointer indicates gauge pressure.</p>	2	
	(f)	<p><b>A simple manometer (U tube) containing mercury is connected to a pipe in which an oil of sp. Gr. 0.8 is flowing. The pressure in the pipe is vacuum. The other end of the manometer is open to the atmosphere. Find the vacuum pressure in pipe, if the difference of mercury level in the two limbs is 20 cm and height of oil in the left limb from Centre of pipe is 15 cm below.</b></p> <p><b>Ans.</b></p> <p>Given :</p> <p><math>S_1 = 0.8</math></p> <p><math>H_1 = 15 \text{ cm.} = 0.15 \text{ m.}</math></p> <p><math>H_2 = 20 \text{ cm} = 0.2 \text{ m.}</math></p> <p><math>S_2 = 13.6</math></p>		4

Take Cd=0.62</b> <b>Ans.</b> Given b =2 m Q = 250×10 <sup>-3</sup> φ = 90° Max d = 1.3 m = H' <b>Q = (8/15) × Cd × √(2g) × tan(φ /2) × H<sup>5/2</sup></b> 250×10 <sup>-3</sup> = (8/15) × 0.62 × √(2×9.81) × tan (90/2) × H <sup>5/2</sup> 250×10 <sup>-3</sup> = 1.465 × H <sup>5/2</sup> 250×10 <sup>-3</sup> = 1.465× H <sup>5/2</sup> 250×10 <sup>-3</sup> / 1.465 = H <sup>5/2</sup> H <sup>5/2</sup> = 0.170 <b>H = 0.493 m</b>  Apex height = 1.3 - 0.493 = <b>0.806 m</b>	<b>1</b>     <b>1</b>  <b>1</b>  <b>1</b>	
	(d)	<b>Explain the working of venturimeter with a neat sketch.</b> <b>Ans.</b> <b>Working-</b> i. The venturimeter consist of a short converging tube leading to a cylindrical portion called throat. ii. The angle of convergent cone is 21° and the angle of divergent cone is from 7° to 15°. iii. The angle of divergent cone is smaller because when water is passing through throat, its velocity is more, since area of throat is less. iv. As this water passing through diversion cone there is chance of separation of fluid flow from boundary of diversion cone causing cavitation. v. The pressure difference from section 1 and section 2 is measured by U tube manometer. vi. The axis of venturimeter may be horizontal or vertical or incline.	<b>2</b>

Q.5	(a)	$Q = \frac{Cd \cdot a_1 \cdot a_2 \cdot \sqrt{(2gh)}}{\sqrt{(a_1^2 - a_2^2)}}$	2	8
		$Q = \frac{0.98 \times 0.0314 \times 7.85 \times 10^{-3} \times \sqrt{2 \times 9.81 \times 4}}{\sqrt{0.0314^2 - (7.85 \times 10^{-3})^2}}$	2	
		<b>Q = 0.0704 m<sup>3</sup>/s</b>	1	
	(b)	<b>A trapezoidal Channel has side slopes of 3 H to V and slope of its bed is 1 in 2000. Determine the optimum dimensions of the channel, if its is to carry water at 0.5m<sup>3</sup>/s. Take Chezy's constant as 80.</b>		
		<b>Ans</b>		
		Q = 0.5 m <sup>3</sup> /s		
		S = 1/2000		
		n = 3/4 = 0.75		
		c = 80		
		For the most economical trapezoidal section		
		Half of top width = sloping side		
		$\frac{b + 2nd}{2} = d\sqrt{1 + n^2}$	1	
		$\frac{b + 2 \times 0.75d}{2} = d\sqrt{1 + 0.75^2}$		
		$\frac{b + 1.5d}{2} = 1.25d$		
		b + 1.5d = 2.5d		
		<b>b = d</b>	1	
		A = bd + nd <sup>2</sup>		
		A = dd + 0.75 d <sup>2</sup>		
		<b>A = 1.75 d<sup>2</sup></b>	1	
		$Q = AC\sqrt{RS}$	1	
		$0.5 = 1.75d^2 \times 80 \times \sqrt{\frac{d}{2} \times \frac{1}{2000}}$		
		Squaring both sides		
		$0.5^2 = (1.75d^2) \times 80^2 \times (d/2) \times (1/2000)$	2	
		$0.5^2 = 4.9 d^5$		
		$d^5 = 0.5^2/4.9$		
		$d = 0.05102^{\frac{1}{5}}$	1	
		<b>d = 0.551 m</b>		
		b = d		
		<b>b = 0.551 m</b>	1	8
